

EDWARD T. LOPEZ

Fullstack Developer & Automation Engineer

Los Angeles, CA | devxed43@outlook.com | [portfolio](#)

PROFESSIONAL PROFILE

Fullstack Developer specializing in Python-driven infrastructure and minimalist web architecture. I leverage a background in music performance, poetry and love for anime/art to bridge complex pattern recognition with scalable, logic-first software solutions. Focused on building "manual" tools from the ground up to ensure deep system-level integration and data privacy.

EXPERIENCE

Lead Software Engineer | Kubernetesified Microservices

- Designed a high-speed **Logic-First Microservice Stack** for URL tokenization and redirection.
- Orchestrated a containerized environment using **Docker** and **Kubernetes (Ingress)** to ensure high availability and sub-millisecond throughput.
- Optimized data integrity and performance by integrating **Redis** for caching and **MongoDB** for persistent token storage.
- Utilized **Pydantic** and **Python-Multipart** for rigorous data validation and secure file handling.

Automation Engineer | macOS Security & System Utilities

- **Ghost Mode:** Engineered a security utility using the **Secrets** library and **Exiftool** to strip digital footprints and metadata, ensuring unrecoverable data deletion.
- **Desktop Organizer:** Developed a real-time directory monitoring system using **OS** and **Shutil** libraries to automate complex file categorization with zero system latency.
- **macOS Native News:** Built a bridge between Python and AppleScript to fetch Hacker News API data and inject it directly into native macOS system dialogs.

Fullstack Developer | Data Sanitization & Management

- **Data Sanitized Dashboard:** Designed a local ETL tool using **Streamlit** and **Regex** to process and clean "dirty" datasets, enabling visualization without exposing private PII.
- **Inventory Manager:** Developed a modular RESTful API using **Node.js** and **Express** for complex CRUD operations.
- Implemented environment-level security via **Dotenv** and executed comprehensive testing suites using

TECHNICAL SKILLS

- **Core Development:** Python (FastAPI, Django), JavaScript (React, Node.js, Express), HTML5, CSS3.
- **System & Automation:** AppleScript, OS Library, Subprocess, Shutil, Pathlib, Watchdog.
- **Data & Infrastructure:** Kubernetes, Docker, Redis, MongoDB, PostgreSQL, Pandas, Regex.
- **Engineering Tools:** Postman, Git, Streamlit, Exiftool, Secrets Library, Pydantic, Dotenv.
